

Divide in PHP

In PHP, arrays are **dynamic**, so you don't need to declare a fixed size like in C/C++. However, you can **create an array with 10 elements** using several methods.

✓ 1. Using `array_fill()` (recommended)

php

```
<?php
// Create an array of size 10, filled with 0
$arr = array_fill(0, 10, 0);

print_r($arr);
/* Output:
Array
(
    [0] => 0
    [1] => 0
    [2] => 0
    [3] => 0
    [4] => 0
    [5] => 0
    [6] => 0
    [7] => 0
    [8] => 0
    [9] => 0
)
*/
?>
```

Syntax:

php

```
array_fill(start_index, number_of_elements, value);
```

✓ 2. Using a loop

php

```
<?php
$arr = [];
for ($i = 0; $i < 10; $i++) {
    $arr[$i] = 0;
}
```

```
print_r($arr);  
?>
```

✓ 3. Using short array syntax manually

php

```
<?php  
$arr = [0,0,0,0,0,0,0,0,0,0]; // 10 elements  
?>
```

💡 **Tip:** In PHP, arrays **don't have a fixed size**, so you can always append more elements later using `$arr[] = value;`.

If you want, I can also show you **how to create an array of size 10 and then store each digit of a number into it** like in your previous code. This is often useful for digit extraction.
