1. how to add table borders in php

PHP itself can't directly "draw" table borders — it only generates HTML, and HTML + CSS control how a table looks.

To add table borders in PHP, you simply need to output HTML table code with the **border** attribute or CSS styles.

Example 1: Using the HTML border attribute

php

```
<?php
echo "<table border='1'>";
echo "<tr><th>Name</th><th>Age</th></tr>";
echo "<tr><td>John</td><td>25</td></tr>";
echo "<tr><td>Jane</td><td>30</td></tr>";
echo "</table>";
?>
```

✓ Quick and easy, but **border attribute is outdated** in modern HTML.

Example 2: Using CSS for better styling

php

```
<?php
echo "
<style>
table, th, td {
    border: 1px solid black;
    border-collapse: collapse;
    padding: 5px;
}
</style>
";

echo "<table>";
echo "<tr><th>Name</th><th>Age</th></tr>";
echo "<tr><td>John</td><td>25</td></tr>";
echo "<tr><td>Jane</td><td>30</td></tr>";
echo "</table>";
?>
```

✓ More control over styles (border color, thickness, collapse spacing, etc.).

If you want, I can show you **how to loop through data from a database and automatically create a bordered table** in PHP. That's usually the real-world use case.
