

Password validation issue

1. why is the output not showing "Password is Valid"? <!DOCTYPE html> <html lang="en"> <head> <meta charset="UTF-8"> <meta name="viewport" content="width=device-width, initial-scale=1.0"> <title>Document</title> <?php \$email = \$_GET["email"]; \$password = \$_GET["password"]; \$set_pass = 1234; if(\$password == \$set_pass) { echo "Password is Valid"; } else{ echo "<script>alert('Wrong Password')</script>"; } ?> </head> <body> <div style="width: 50vw;margin-top:10vh;border: 1px solid black;padding:4rem;"> <form method="GET"> <label for="email">Email : </label> <input type="text" name="email">

 <label for="input1">Password : </label>.2

1. why is the output not showing "Password is Valid"?

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
  <?php

    $email = $_GET["email"];
    $password = $_GET["password"];

    $set_pass = 1234;

    if($password == $set_pass) {
      echo "Password is Valid";
    }
    else{
      echo "<script>alert('Wrong Password')</script>";
    }

  ?>
</head>
<body>
<div style="width: 50vw;margin-top:10vh;border: 1px solid black;padding:4rem;">
<form method="GET">
<label for="email">Email : &nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;</label>
<input type="text" name="email">
<br>
<br>
<label for="input1">Password : &nbsp;</label>
<input type="number" name="password">

<br>
<br>

<input type="submit" name="password" value="Check">
</form>
```

```
</div>
```

```
</body>  
</html>
```

Ah, I see the issue 🙄.

The problem is in your **form inputs** — you are using the same `name="password"` for **two different inputs**:

1. The actual password input field:

```
html  
  
<input type="number" name="password">
```

2. The submit button:

```
html  
  
<input type="submit" name="password" value="Check">
```

⚡ What happens?

When you click **submit**, the browser sends the submit button's value ("Check") as password instead of the numeric value from your password input field.

So your PHP receives:

```
php  
  
$_GET["password"] = "Check"
```

instead of the number you typed. That's why the comparison never passes and "Password is Valid" never shows.

✅ **Fix:** Remove `name="password"` from the submit button. Use only `value="Check"`:

```
html  
  
<input type="submit" value="Check">
```

Now your PHP will properly compare the password input.

💡 Another improvement:

If you want to avoid type issues, make sure `$set_pass` is a string (because form inputs are always strings):

```
php

$set_pass = "1234";
```

and check with:

```
php

if ($password === $set_pass) {
    echo "Password is Valid";
}
```

Would you like me to also show you how to display **"Password is Valid"** inside the `<body>` (instead of `<head>`), so it looks cleaner on the page?
